How To Get Accepted Into Any CPA Networks

I've seen some people really need a step-by-step guide on how to get approved by CPA networks.

I am not a US resident. When I was first started with affiliate marketing, I didn't even have a website which CPA networks "love" to see. Yet I've been approved by practically every major CPA network that I have applied to.

You don't have to be a US resident to be able to get approved by CPA networks.

Though a few networks like Azoogle only approves residents from US (and a few other countries like CA, UK, AUS etc...), you can skip these. Apply with other networks. There are tons of network around.

Most networks accept international affiliates. I'm now an affiliate to the following CPA networks:

- Affiliate.com
- Azoogle
- Ads4Dough
- CX Digital
- CanadianSponsors
- Clickbooth
- Copeac
- Neverblues
- Hydra
- FluxAds
- OurFreeStuff
- Pepperjam
- XY7

Note: I was approved by Azoogole when they still allowed international affiliates.

I managed to get approved by the above CPA networks using the method I'm going to explain below.

Read and apply my steps, you shouldn't have a problem getting approved by most of the networks you apply to.

Sign Up With CPA Networks

For every CPA networks, you need to show them a decent website to get approved. It **MUST** be you own site, a few networks will require you to show ownership of your website before they'll approve your application.

My friend received this message from Azoogle when he applied:

“If your domain(s) are privately registered, you will need to email us a receipt from your domain registrar or a screenshot of your online management panel—something showing the domain name and your name and address—so that we can verify ownership.....”

As long as it's your own website, it could be a **totally unrelated website** to show them, this doesn't matter.

When I was first started, I showed them my personal website. I'm a t-shirt graphic designer; I have personal website showing all my past work. I used that “unrelated” site to apply to a few networks and get approved without any problems.

When you fill out the affiliate application form, there is usually a field where you can put any message for the administrators who will review and approve your application.

Tell them you're going to run **PPC direct linking** so your website isn't really all that applicable.

Make it sound like you're a seasoned CPA marketer. Tell them you're already with a few other networks and someone said something good about them, so you want to try out their offers.

Build a Site To Show CPA Networks

If you don't have a site and you're too lazy to build one from scratch, there is a short cut.

I've a little trick where you get to set up a professional website in 5 minutes.

It's simple and fast.

You download a free script, upload it to your hosting, a few clicks more and you're done. It gives you a great site that most networks "love". Last year, I tried this with Azoogle and I was approved in 24 hours!

For this method to work, you need to get a domain name and get it hosted.

This is what you can do:

1. Sign up at <https://pnp.bigfishgames.com>
2. After you've signed up, go here:
<https://pnp.bigfishgames.com/content/xml.php?page=sgs>
3. Download Satellite Gamesite System v0.7
4. Unpack it on your server, and run install.php
5. You're done. You now have a nice, content filled site to show the networks.

Note: One day, this script-generated site will get saturated. CPA networks will notice there are too many applications with exactly same site designs. When that happens, your application will not go through.

To stay unique, there is another way of doing it:

Create a WordPress site with some PLR content on it. Buy some PLR content on niche like financial, health, education, insurance etc. CPA networks love those topics; most likely they'll approve you. Though this cost you a little work and money up front, but you'll get a unique site for CPA application.

Call CPA Networks for Fast Approval

After you've sent in your application, you should receive their reply in a short while.

Normally they'll send a message to you through an autoresponder. Read their message, find their phone number and call them immediately.

This is what you need to say over the phone:

"Hi, I've just signed up as an affiliate, and I want to talk to an affiliate manager to get me approved"

When you're on the line with an Affiliate Manager, tell him/her you've just sent in your application and you would appreciate if he can get you approved as soon as possible so that you can send traffic.

They might ask you a few simple questions like how did you find them, how do you drive traffic, what offers do you plan to run with them etc....

Tell them your fellow members from Digital Point (or Warrior Forum) recommend them. A couple of members there are having some success with their email submit offers and you're planning to test some of those offers with your traffic. Tell them you're a ppc marketer and you do **direct to merchant pay per clicks**.

This is sufficient to "convince" them you know your stuff and to get you approved.

Reply CPA Networks Questionnaire

A few CPA networks (normally bigger players in the market) will send you an email requesting some information before they will approve your application.

I've helped a friend out with answering a questionnaire from Affiliate.com and Azoogle. [Download the document here](#) (it's free), take my format reference and use your own words. You should have no problem getting approved.

Non US residence needs to complete a **W8-Ben** form and submit to the networks. [I've completed a sample here showing you how to fill the form.](#)

If You Still Need Help

P/S: Once you've signed up with a few CPA networks, let's make some money using poll method. I am making around \$100/day with poll method + CPA offers.

There is a lot of stuff out there about making money online, but they're either too complicated for most people to implement, or they're not actually showing you what to do.

You're at the right place now. I'm going to show you my system.....my method of putting this to work. [Click here to find out](#)
